Subject: Report on study of the market potential of "Crack N' Dip" in Bangladesh

Dear Ma'am,

I am pleased to submit our report titled "Study of the Market Potential of Crack N' Dip in Bangladesh" as a partial requirement for the course MKT344 (Consumer Behavior).

The entire project has been a fantastic experience, with us gathering an array of knowledge from various practical approaches and with your impeccable guidance. We wholeheartedly appreciate your valuable assistance that has empowered us to explore the world of consumer behavior and learn a lot through completing full-fledged research on the project.

Thus, we request that you accept our submission of the group project. We firmly believe that we have followed all of your instructions and guidance regarding the project.

Sincerely yours,

Mohammad Zihaduzzaman 2322020030

Introduction

The snack industry in Bangladesh is highly competitive, with traditional products such as chips and crackers being the most common products. While these products are widely consumed, many of these products have a similar taste and are not very functional in terms of being consumed with other foods such as dips or sauces. This calls for an innovative and convenient product that enhances flavour and versatility.

To address this need, we have developed a two-part snack, "Crack N' Dip".

It is conveniently packaged in a single package containing flavoured chips and a dipping sauce. The aim of this product is to enhance the enjoyment factor of snacks while eliminating the convenience problem of having to carry many different dips.

This product is targeted at young adults who are looking for fast, convenient and "premium" snack options, such as students and young professionals. A product like this is capable of meeting consumers' evolving needs as their lifestyles change and as the need for more on-thego food increases.

This project involved a focus group discussion to better understand consumer snacking behaviors, preferences and perceptions of this product idea. The insights obtained from the discussion have been used to assess the product's potential and to inform the marketing plan.

Objective

The primary objective of this report is to formulate a comprehensive go-to-market strategy for CRACK N DIPS, a dips-based, stackable crisp to tap into the growing appetite for premium, on-the-go snacks in Bangladesh. This strategy seeks to position the product as the ultimate snack for ambitious professionals, active people and students who don't want to give up on taste and convenience when it comes to snacking, by harnessing the brand's unique stackable packaging to stand out from conventional snacks. By examining the trends in consumer lifestyles, competitive environment and retail ecosystem, this report will identify a plan to build brand equity.

Rationale

There are a number of reasons that have driven us to bring CRACK N DIPS to the people of Dhaka, a city for which we have seen a significant shift in snack trends. As the pace of city life accelerates, we have observed that a considerable portion of the population, including students, professionals, and active individuals, who although looking for convenience, are at the same time becoming more critical of the quality and convenience of their food options. CRACK N DIPS offers a perfect fit for these consumers, with a premium quality, stackable snack that allows busy people to indulge in a satisfying snack in a busy lifestyle.

Reasons for the Adoption of CRACK N DIPS in Dhaka

Currently, in Bangladesh, the snacking market is saturated with unique, bagged Dips chips that are delicate, easily shattered, and difficult to handle and eat on the go. We understand that the consumer in Dhaka is bombarded with time demands and juggles many tasks. CRACK N DIPS has a functional benefit: our distinctive, stackable shape delivers product integrity, so consumers can enjoy chips.

that can be enjoyed from start to finish, whether they are studying, working in a corporate environment, or on the go.

And there is an increasing trend toward "smart eating." Although people are short of time, they are also rejecting the idea of "nutrient voids" and wanting to snack with a high quality, reliable product. Our product addresses the psychological need for a

"snack break" to provide a momentary culinary reward in a stressful urban environment. It's not simply filling their hunger, it is offering a consistent, crunchy experience that is premium and considerate satisfying those who see the choices they make - even in the smallest matters of consumption as an expression of their lifestyle.

Possibility of Success for CRACK N DIPS

We believe the timing for CRACK N DIPS is ideal due to the rising sophistication of the urban retail environment in Bangladesh. With the expansion of modern supermarkets, convenience stores, and e-commerce platforms in Dhaka, there is an increasing appetite for unique, international-standard snack formats. Consumers are actively seeking novelty, and the distinct, recognizable packaging of CRACK N DIPS sets it apart as a trendy, modern alternative in an otherwise saturated market of traditional bags.

Furthermore, the competitive landscape shows a gap for a brand that bridges the space between low-cost local snacks and high-end imported goods. CRACK N DIPS is positioned to occupy this "affordable premium" niche, offering an accessible price point while delivering a superior, controlled snacking experience. The urban population, constantly looking for new experiences to integrate into their routines, will find in CRACK N DIPS a perfect companion for their worklife balance. By focusing on quality consistency, portability, and the sheer satisfaction of the "stackable" format, we are confident that CRACK N DIPS will not only capture attention but will foster long-term loyalty among the vibrant, modern demographic of Dhaka.

Research Methodology

Primary Data

We have collected primary information from first-hand sources through surveys or observation. We have used both two data collection methods.

Quantitative Data Collection Methods: We used Google Survey Form, where we collected pie charts and bars that represented the quantitative data. We sent a set of questions to 47 respondents in this method.

Qualitative Data Collection Methods: These data collection methods include interviews, questionnaires, FGD, etc.

- Focus Group Discussion: We invited a few people for a Google Meet meeting. We had two practical discussions about our upcoming recreation center idea, “AirSpa” Oxygen Bar. Our invited participant suggested some ideas to improve our marketing and taste as well.
- Personal Interview: We asked a person as an interviewer face-to-face question. In that one-to-one conversation, we questioned them about their health and lifestyles and many more. Secondary

Secondary Data

Data was mainly collected from the Internet. Most of the sources are online articles, journals, and YouTube videos. It was all about the basic ideas of recreational centers currently present in Bangladesh and our new recreation idea, the "CRACK N DIPS."

Qualitative Data Analysis

In the qualitative part of our primary research, we have conducted two focus group discussions (FGDs) and three one-on-one interviews to explore consumer's snacking habits, preferences and expectations towards a new interactive chip snack. While the FGDs were university students, the interviews were individual consumers who often consume snack items. This was done to understand preferences for taste, consumption patterns, perceptions of chips with dips and purchasing factors such as product price, convenience and packaging.

> "I always love to have chips as a snack, when I watch Netflix or just if I want a quick snack. I can eat it anytime and it's easy to eat. I think this (Chips & dips) is very interesting and very different from ordinary snacks, so I might like to try it. But it has to be convenient and easy to consume."
>
> – Rafid, FGD-1

> "I like Lay's chips mostly, and I particularly enjoy the red pack. The taste is the most important factor for me. I am fond of very strong tastes, and I love experimenting with different tastes. Chips with dips are quite appealing to me because there can be various flavors available, including spicy ones."

– Sifatul,
FGD-1 “I have already eaten dips with snacks, such as nachos and fries, and even with pizza, so it is not a new idea for me. I think it's a good idea and people would want to try it. I would prefer to have different types of sauce though. But it should be portable and not messy so that it does not get difficult to eat if we are outside."

– Rizvi,
FGD-1

“Chips are definitely one of my favorite snacks, particularly when I am unwinding or leisurely eating. I like to have something tasty and convenient, and chips fit this bill. I think using dips with chips is a good idea as it can add to the experience of eating chips but it should be easy to use. If it gets too messy and complicated, then people might not use it.

– Nafees,
FGD-1

I love strong tastes, such as blue Lay’s or even Pringles, hence taste for me is crucial. Incorporating dips such as garlic, hot, or mayonnaise would add an extra taste to the snack. It would be great if several dipping sauces were offered. On the other hand, it would be great if the packaging were user-friendly and didn’t create any mess.

– Shahed, FGD-1

“It’s something that I like to do during movie nights, WWE, or any football games, so it is more like something that I do for entertainment. The ones that I like the most are Pringles and flavor chips, and I really like experimenting with new flavors. It sounds like a great idea, and I believe it will be very fun, but you must have enough dips; otherwise, it may become inconvenient.”

-Saad, FGD-1

“I have been consuming chips like Meridian since my childhood, and even today chips rank among my favorite snacks. Some of the flavors that I enjoy include creamy onion chips by Kurkure and Lay’s. I have not experimented with many dip combinations along with chips, but would like to try.”

– Bayazid, FGD-2

“I was a consumer of snacks such as Ruchi Chanachur and Potato chips since my childhood days, and I still have a liking for chips. However, I experimented with chips such as Detos with dips, but it was not an enjoyable experience for me. I feel that at times the chips may not be compatible with dips, and there should be a balance in quantity and taste, specifically a pair or combination of chips & dips. Hence, the product should be properly designed in order for it to be successful.”

– Maisha, FGD-2

“I have tried snacks such as Mr. Twist and Bombay potato crackers and I like chips, particularly spicy ones like Lay's masala. I have eaten chips with sauce before. I think that chips with dips or sauces, if done right, could be a good taste combination. I also think chips with something else, something different, could work but it has to be innovative and well-balanced."

– Kayed, FGD-2

“I have been eating snacks like Ruchi banana chips and so on, and I still think chips are one of the top snacks. I have tried chips with dips, such as Detos, but I do not like that experience. However, I would like to try new flavors of dips like garlic, honey mustard and sweet chili with chips.”

– Rafsun, FGD-2

“Since childhood, I have been eating snacks like potato chips, and I think now also chips are ranked as top snacks. I generally prefer brands like Lay’s, particularly flavors

such as cream & onion, cheese. If the combination is well-balanced and has to be convenient to eat then I might try it."

– K.B Pushpo, FGD-2

The first male participant in the individual interview said,

"I always had simple snacks like crackers, but after chips like Lay's came to the market, I started purchasing it more, especially spicy chips like Magic Masala. Now I also eat different flavors of Lay's chips, like tomato and BBQ too. I have tried chips with sauce at home, but it is a bit weird and messy to eat, which I don't prefer. I usually buy snacks from grocery shops and super shops, and I think this idea is good if it is clean and easy to eat. For me, 100-120 taka is acceptable, but taste is the main thing for me."

– Uzair Gani, Student of North South University

(Interview-1) Another male respondent mentioned,

"Ever since I was a kid, I had been having chips, including Ruchi Banana chips, Potato Crackers, and chocolate. My favorite brand of chips now includes Lays, particularly flavored with cream and onion. Also, I have experimented mixing chips with various sauces, including spices and even chicken sauce, and I found this very fascinating. This is because I don't find this product concept frustrating, and it will be better if more flavors are included. However, proper packaging must be considered because it should be easily portable. I would like having onion flavored chips and BBQ sauce, and a price of 100 taka for 70 grams would be good enough."

– Nissan, Student of North South University (Interview-2)

The third male participant in the individual interview said,

"I was used to eating snacks that included Bombay Sweets chips, Chanachur, Ring chips, and Curl chips; even today, chips remain one of my favorite snacks. At present, my choice includes chips from companies such as Lay's as well as snacks like Nachos and Detos. I have eaten chips with different sauces, including salsa, and have found it quite interesting. The preference of my friends and family members is also similar to mine, including Lay's chips. Among the flavors that I would prefer the tomato and

pudina, among others. For the packet size, I would prefer something smaller at around 50 TK."

- Ipty, Student of North South University, (Interview 3)

In essence, the qualitative research shows that chips are a popular snack among young people, primarily consumed at leisure and social occasions, with a preference for strong and spicy flavors. Participants found the idea of chips and dips intriguing and appealing, although concerns were expressed about the messiness, convenience and balance of chips and dips. Consumers stressed on packaging convenience, taste and price (80-120 BDT). In conclusion, the concept holds promise if it offers a convenient, tasty and attractive product that can be incorporated into the lifestyle.

Quantitative Data Analysis

This section covers key statistics of both qualitative & quantitative statistical data obtained from the survey questionnaire to provide valuable information on primary research. The following questions illustrate responses to the introduction of the new product "**Crack N Dips**" completed by **60 respondents** in the Bangladeshi market:

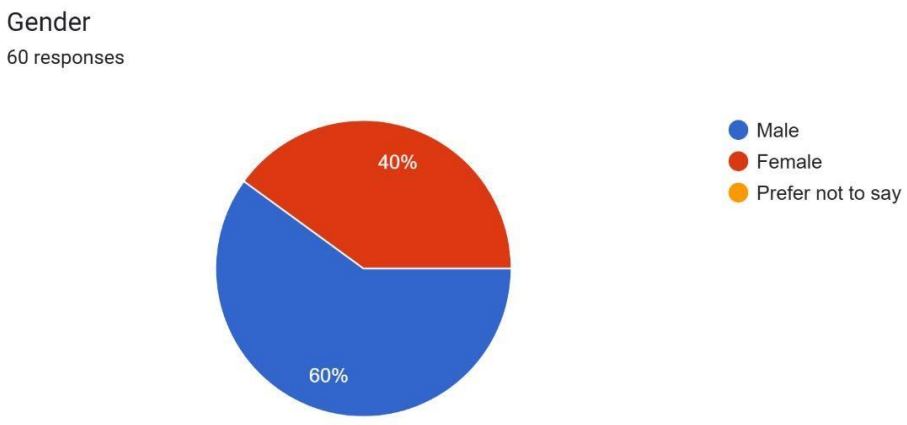

Figure 1: What is your gender?

The survey was completed by **36 males (60%) and 24 females (40%)** out of a total of 60 respondents, thus showing that the research contains more opinions of the men society as compared to women.

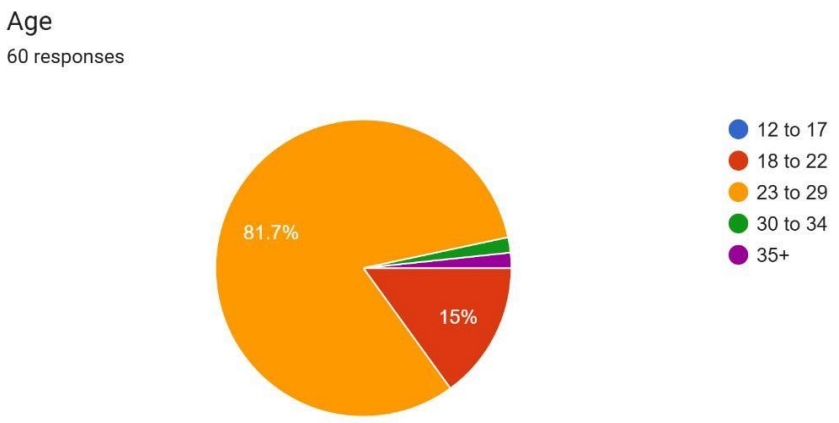

Figure 2: What is your age?

The respondents were heavily oriented within the age **23 to 29 as it comprises 81.7%** (49 people) of the total respondents while 15% (9 responses) are within age 18 to 22. The rest of the respondents are comprised of ages between 30 to 34 and above 35.

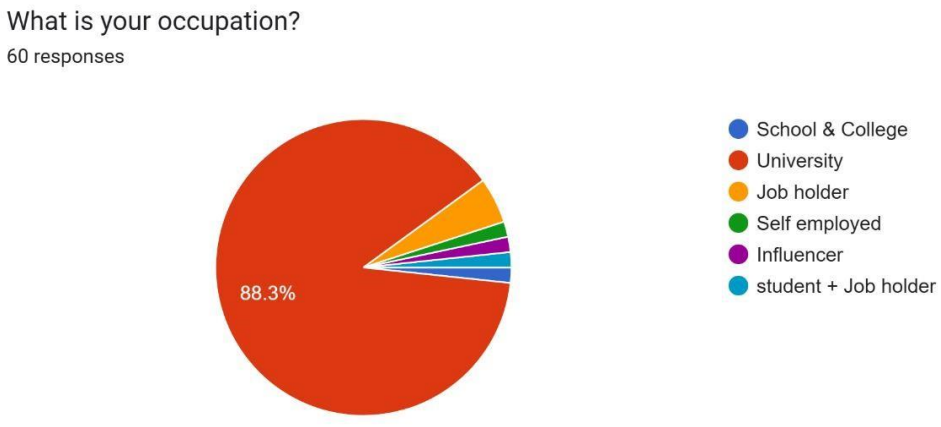

Figure 3: What is your occupation?

The respondents were heavily occupied with university as it shows **88.3%** (53 responses).

Closely followed by job holders with 5% (3 responses).

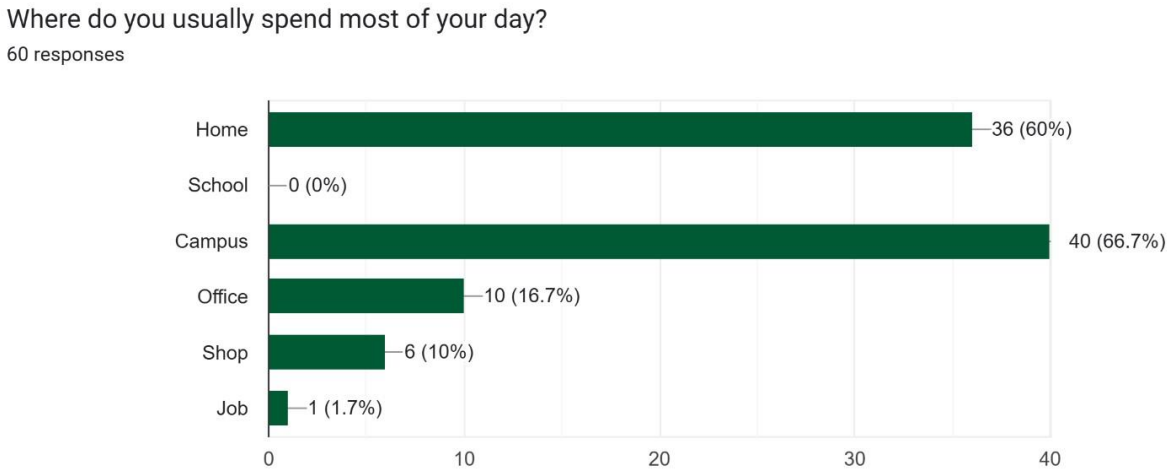

Figure 4: Where do you usually spend most of your day?

This survey response indicates a higher portion of respondents like to spend time at **campus with 66.7%** (40 respondents) which is followed closely by spending time at **home with 60%** (36 respondents). The survey also shows 16.7% (10 people) likes to spends their time at the office while 10% (6 persons) like to do shopping. This indicates the **respondents like to socialize more at campus than staying alone at home**.

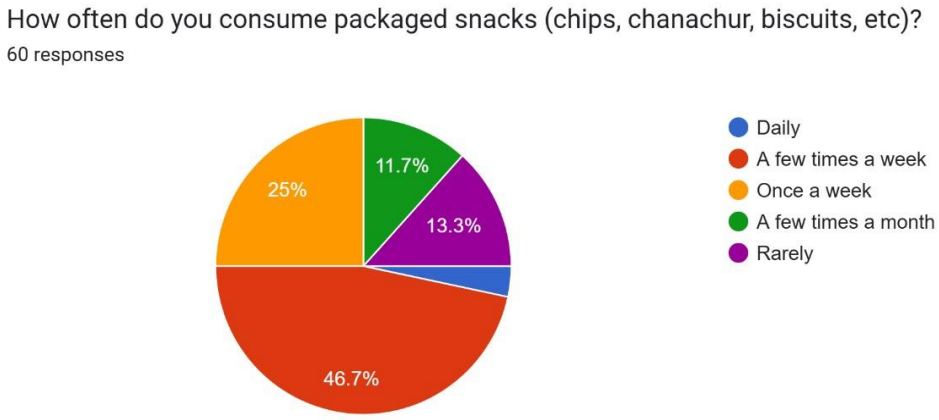

Figure 5: How often do you consume packaged snacks (chips, chanachur, biscuits, etc)?

When asked about how often packaged snacks are consumed, the most common answer was **a few times a week with 46.7% (28 respondents)**. Only **3.3% (2 people) like to consume snacks daily** while 25% (15 people), 13.3% (8 people) & 11.7% (7 people) are taken respectively once a week, rarely and a few times a month. This shows that consumers' **appetite towards snacks are decreasing day-by-day** as the consumption of snacks is decreasing.

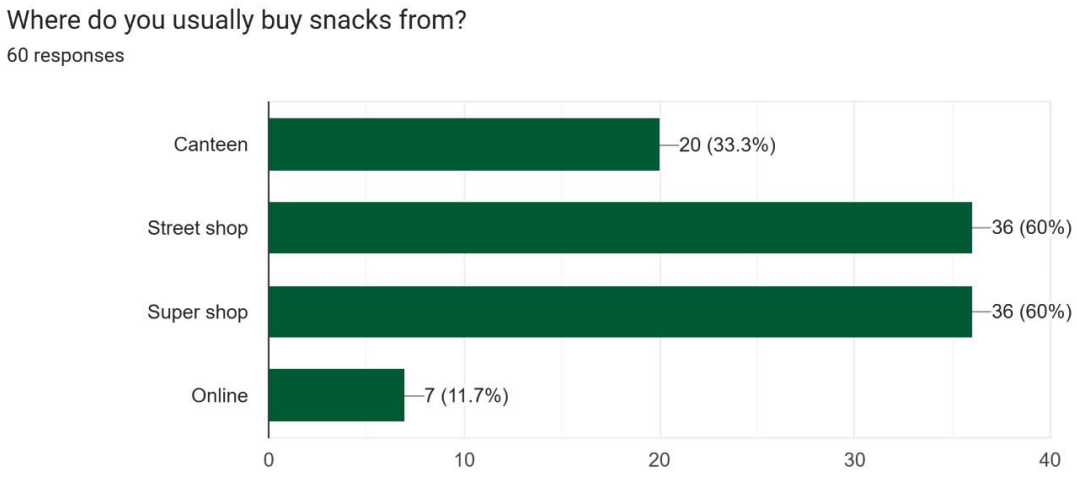

Figure 6: Where do you usually buy snacks from?

This section dives deeper into the thought process of the participants where we can learn that most snack consumers like to purchase snacks from **street shops (60%) and super shops (60%) with each getting 36 responses** as canteen (33.3%) with 20 responses and online shopping (11.7%) with 7 responses comprises the rest. This shows consumers **like to physically shop** rather than online shopping.

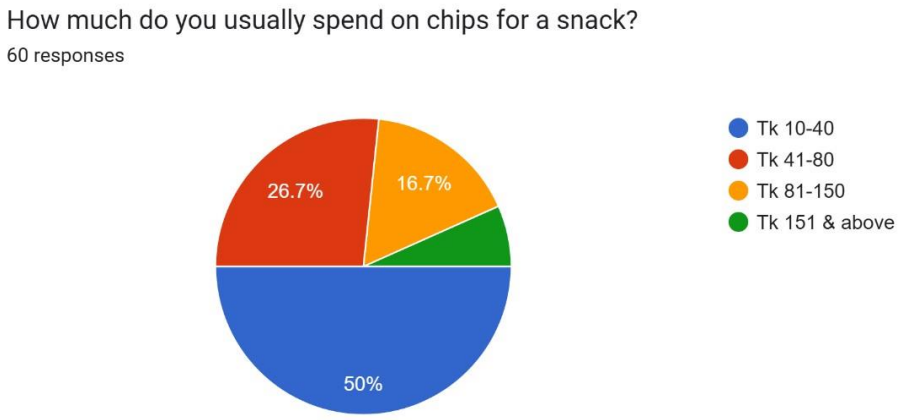

Figure 7: How much do you usually spend on chips for a snack?

This is a quantitative questionnaire aimed to find the amount of money (Tk) consumers like to spend on chips. Of 50 respondents, **50% (30 responses) spend between Tk 10-40**, 26.7% (16 responses) spend between Tk 41-80. The rest comprises 16.7% (10 responses) on Tk 81-150 and 6.7% (4 responses) on Tk 151 and above indicating a **mixed responses**.

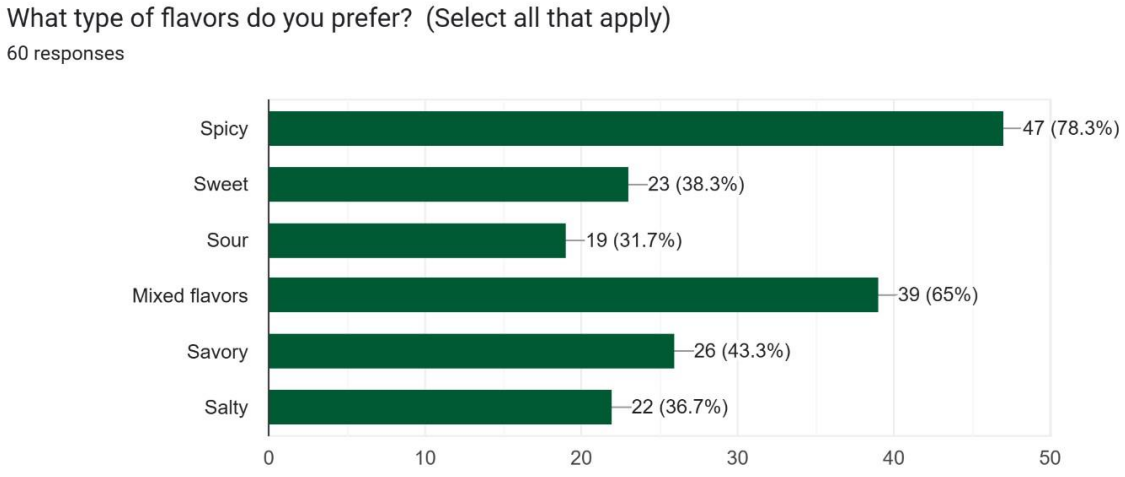

Figure 8: What type of flavors do you prefer?

The outcome of this survey was very interesting as the votes of the survey favored the **spicy flavor with 78.3%** (47 respondents) and **mixed flavors with 65%** (39 respondents). The flavors savory (43.3%, 26 responses), sweet (38.3%, 23 responses) & salty with 36.7% (22

responses) got almost the same responses while sour was favored with 31.7% (19 responses). Conclusively, the questionnaire also shows **multiple flavors appreciated** by the respondents.

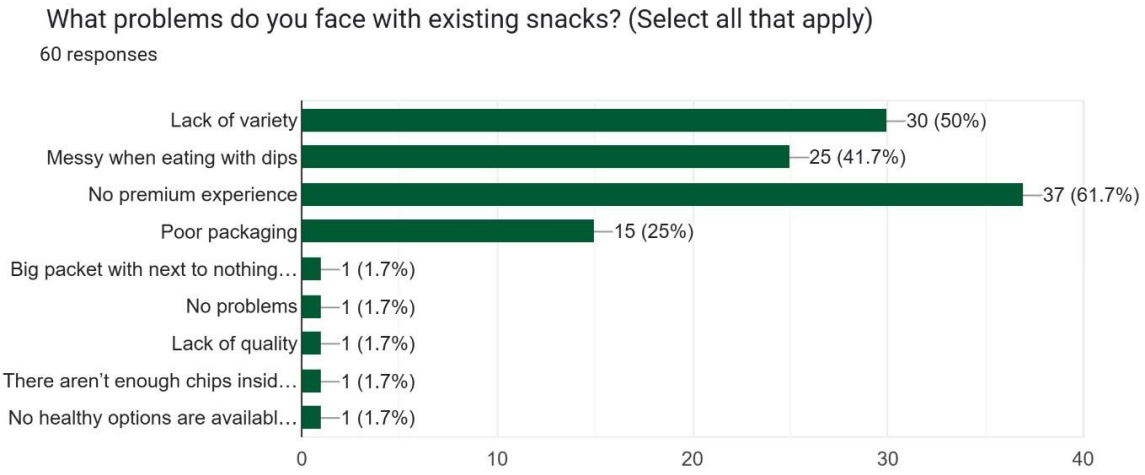

Figure 9: What problems do you face with existing snacks?

"No premium experience" was the most common choice of answer responded **by 37 people (61.7%)** indicating that **they want something new and unique** in their snacks that mesmerizes their tastebuds. "Lack of variety" and "Messy when eating with dips" were identified with 50% (30 people) & 41.7% (25 people) respectively. "Poor packaging" was also a concern regarding existing snacks (25%, 15 respondents).

Some respondents (1.7%, 1 people) responded with the following statements also: "Big packet with next to nothing inside", "Lack of quality", "There aren't enough chips inside the packet" & "No healthy options are available like other countries".

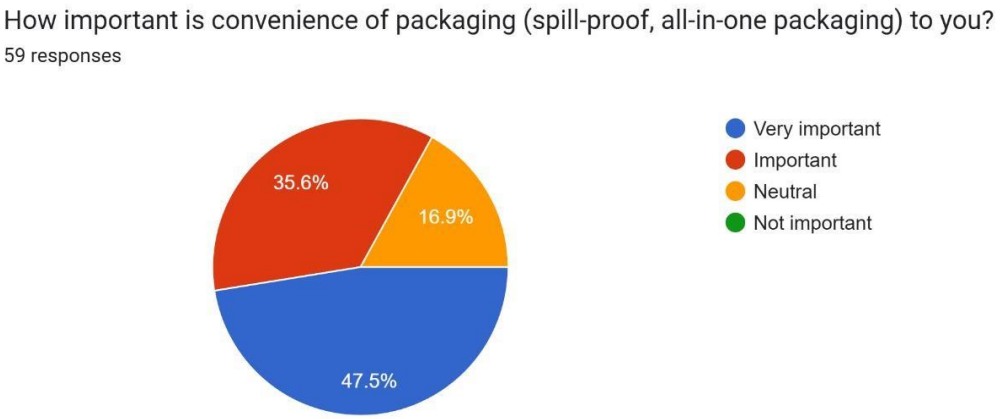

Figure 10: How important is convenience of packaging (spill-proof, all-in-one packaging) to you?

The option "**Very important" received the highest number of responses with 25 people totaling almost half (47.5%) 28 people of the total response** to the question on how important is convenience of packaging to the respondents. 35.6% (21 people) responded with stating it was "Important". Additionally, 16.9% (10 people) was "Neutral" in their stance.

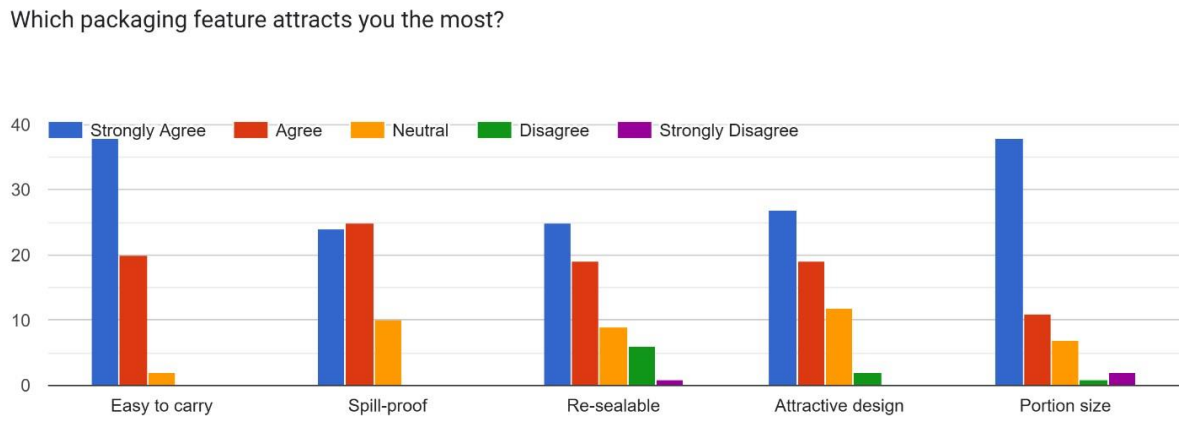

Figure 11: Which packaging feature attracts you the most?

This was a very analytical question asked to provide which packaging feature attracts the respondents. The option **"Easy to carry"** was favored by **38 respondents who strongly agreed** while half of the respondents **(20 people) agreed** to the feature of ease. **"Spill-proof"** got the highest percentage with **25 people agreeing** while **24 people strongly agreed** and **10 people were neutral** on the question. In the **"Re-sealable"** question, strongly agree got the highest respondents with **25 people** while the chart decreased **from 19 people to 9 then 6 then down to 1 person from the statements: agree, neutral, disagree & strongly disagree**.

Similar to the "Re-sealable" question, **"Attractive design"** performed in the same way to decrease from **27 people strongly agreeing to 19, 12 to 2 disagree**. Lastly, the votes were unanimously **voted strongly to agree on "Portion size" with 38 votes** while other options got between 11-2 responses **showing portion size should adapt to the packaging design**. This is rational because most people in Bangladesh think they get a lot of chips in big-sized packets, only later to find out that they have been tricked; thus raising a concern on portion size.

Ultimately, **all of the packaging features got strong responses on strongly agreed** while some agreed to some extent on some of the features.

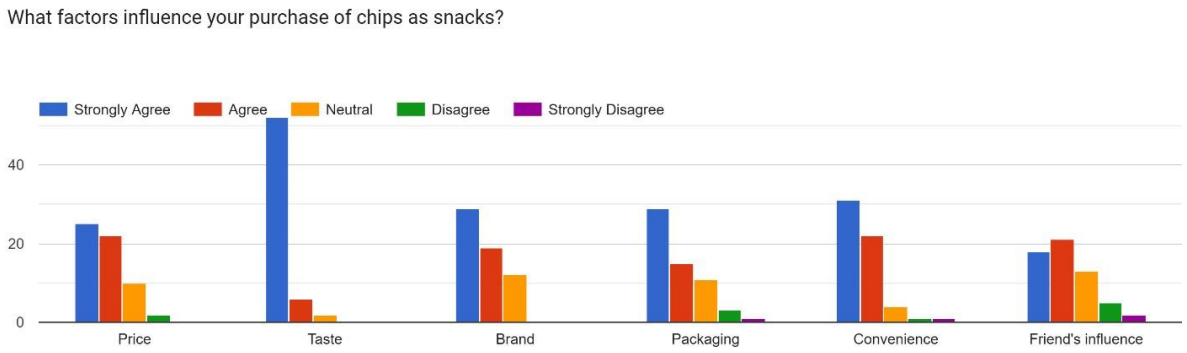

Figure 12: What factors influence your purchase of chips as snacks?

Another very important question was asked to the participants to find out among how some factors affect purchasing decisions of chips. Only, **"Taste" got the highest response with 52 people strongly in agreement**. Moreover, this response was so unanimous that **it got almost twice that of any other factors in any decisions**. **"Price"** got responses on **strongly agreed (25 people) and agree (22 people**) while **neutral got (10 people).** The factor **"Brand"** decreased as it moved **from strongly agree (29 people) to agree (19 people) to neutral (12 people). "Packaging"** was also a very crucial concern in decision making as **29 respondents got strongly in agreement** while other agreements comprised **15,11,3 and 1** respectively. **"Convenience"** got strong agreement in **strongly agree (31 people) and agree (22 people)** whereas a small percentage of **4-1 people voted neutral, disagree and strongly disagree**.

Finally, **"Friend's influence"** got responses on **agreed (21 people), strongly agree (18 people) and neutral (13 people)** while very few people disagreed.

In conclusion, this questionnaire showed that the p**hysical aspects of the product influenced the consumers the most with taste, packaging & convenience** all contributing significantly.

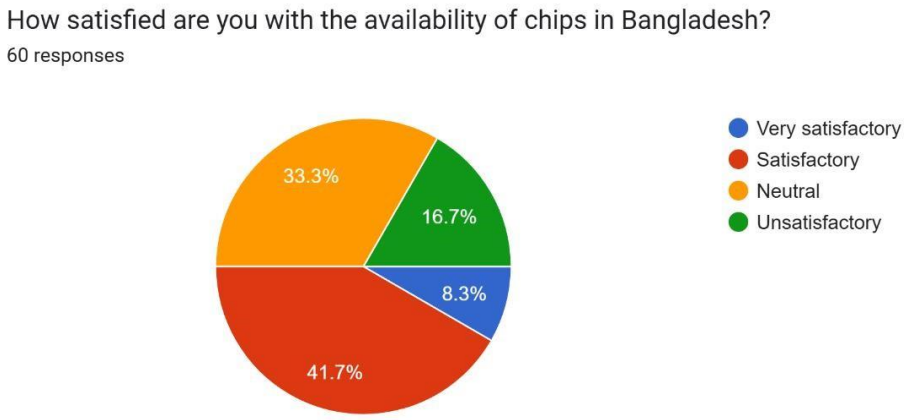

Figure 13: How satisfied are you with the availability of chips in Bangladesh?

When asked about the availability of chips in Bangladesh, most of the respondents were satisfied (41.7%, 25 respondents) and were in neutral (33.3%, 20 respondents) state to the fact that they **do not have an issue regarding the distribution of chips**. On the other hand, only a small number of the respondents responded to be unsatisfied (16.7%, 10 responses) on the fact that the distribution system of chips is not well maintained.

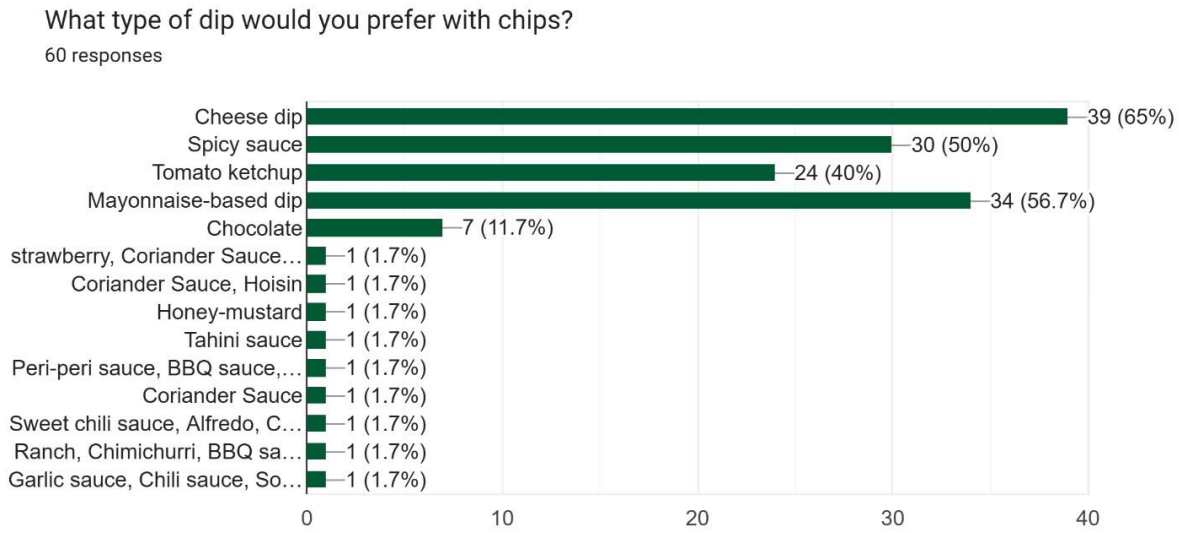

Figure 14: What type of dip would you prefer with chips?

The respondents shared their experiences in dips that they would prefer to have with chips. Both **"Cheese" & "Mayonnaise-based" dips were favored with 65% (39 responses) and 56.7% (34 responses)** respectively showing diverse tastes. "Spicy sauce" was their 3rd most

preferred with 50% (30 votes) while “Tomato-ketchup” & Chocolate-based” dips got 40% (24 votes) and 11.7 % (7 people).

Moreover, some people responded to dips like honey-mustard, bbq sauce, peri-peri sauce, coriander sauce, chilli sauce and so much more.

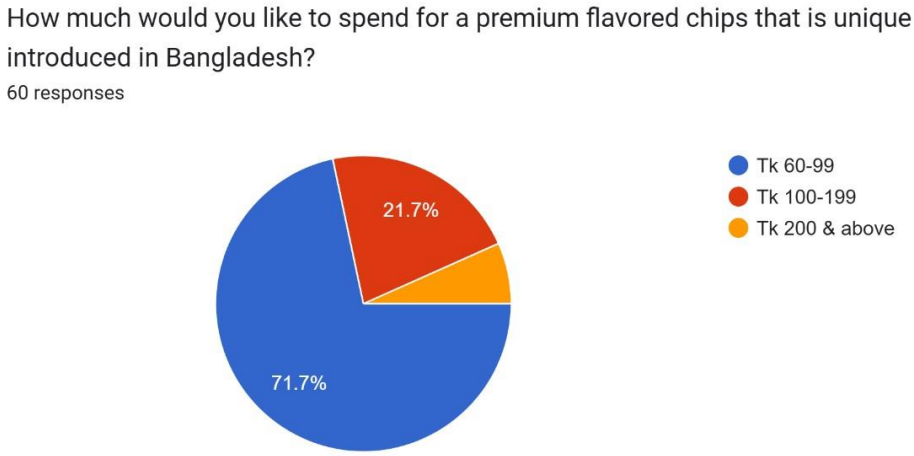

Figure 15: How much would you like to spend for a premium flavor chip that is unique & yet has not been introduced in Bangladesh?

This was a direct question to gain insights on how much the respondents would like to spend for a premium flavor chip that has not been introduced in Bangladesh. The **most common answer was that they would like to pay between Tk 60-99 for the unique flavored chips with almost two-thirds (71.7%) with 43 responses going in favor**. 21.7% with 13 people were in favor to pay between Tk 100-199 while only 6.7% (4 people) would want to pay above Tk 200. This showed that **most of the consumers are budget conscious** to pay for a premium bag of chips.

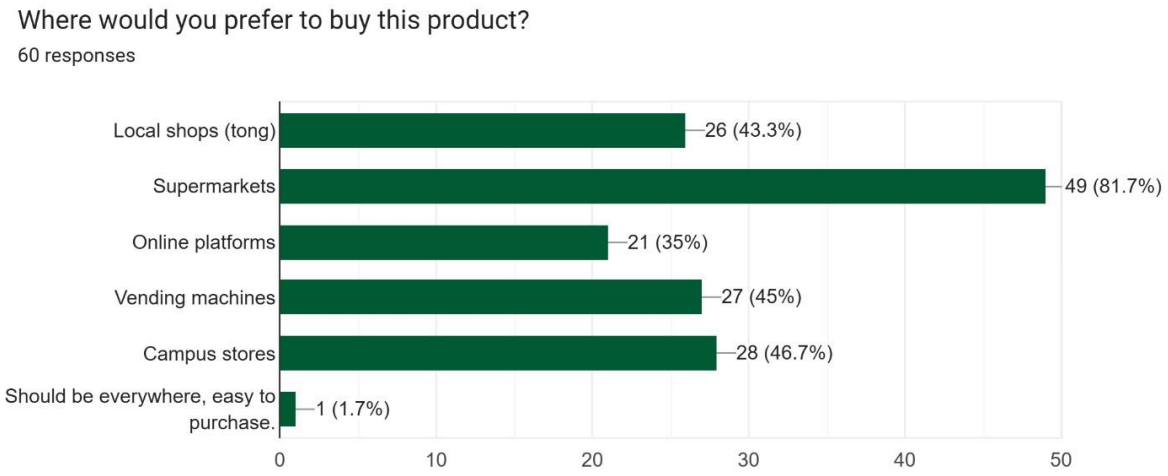

Figure 16: Where would you prefer to buy this product?

This questionnaire was aimed to gather information on the distribution of chips that the respondents would like to purchase from. "**Supermarkets" got the most responses with 81.7% with 49 people** showing a particular preference. Other distribution locations such as "Campus stores", "Vending machines" & "Local shops" like tongs scored between 46.7%43.3% with responses between 28 to 26. Lastly, consumers voted in favor of "Online platforms" with 35% (21 respondents). This shows **consumers want to buy from a reliable distribution source.**

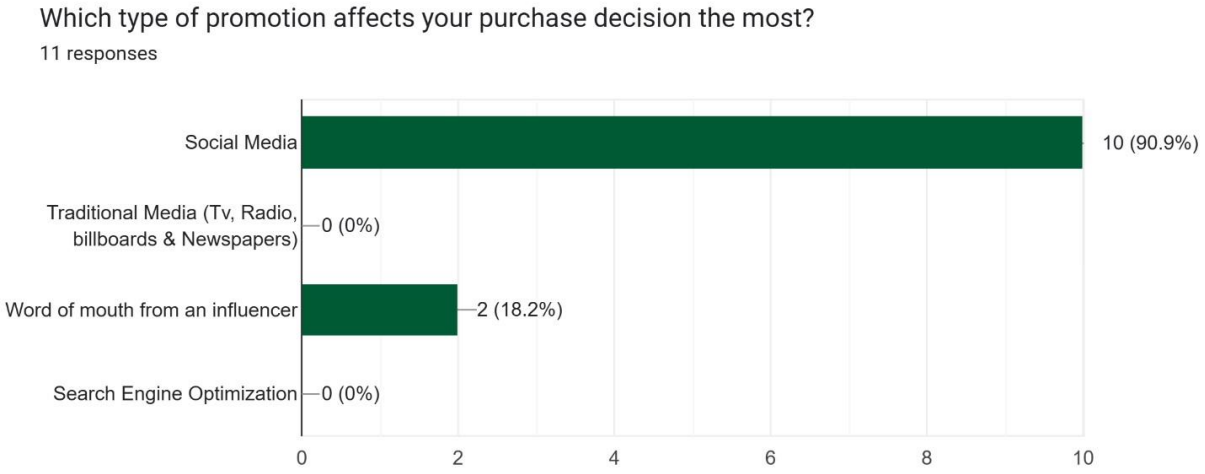

Figure 17: Which type of promotion affects your purchasing decision the most?

This survey response indicates that **most people are affected by social media in purchasing decisions of snacks like chips as indicated by 90.9% with 10 respondents**. This means that social media marketing would be most effective in today's generation for businesses to increase sales. **Traditional media and Search Engine Optimization got 0 votes** while Word of mouth, Influencer scored 18.2% with 2 respondents.

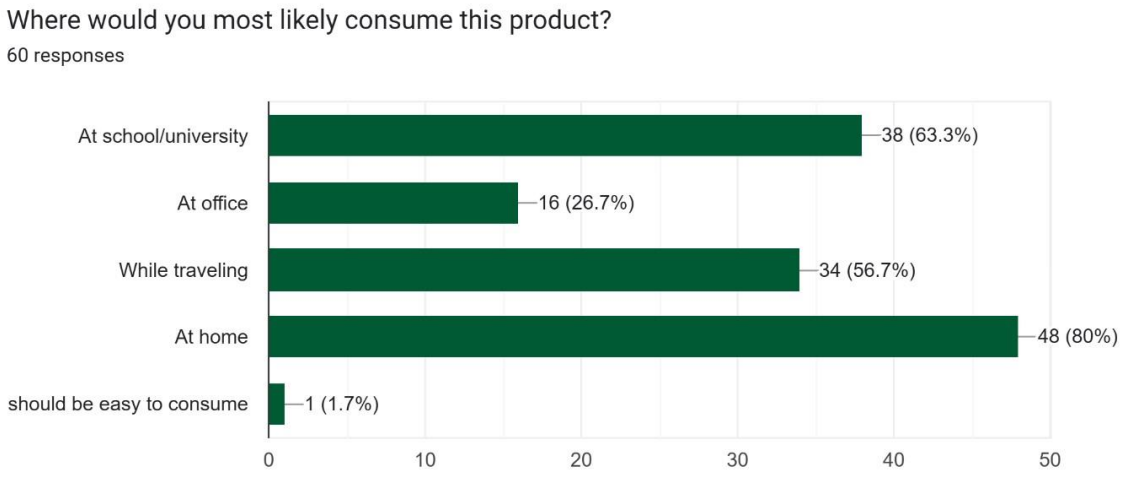

Figure 18: Where would you most likely consume this product?

This was a behavioral question aimed to learn the place of consumption of chips. **80% with 48 respondents** topped the list to the fact that they **like to consume at home**. Secondly, they voted for the statement that they like to consume almost similarly at university and while travelling with 63.3% (38 votes) & 56.7% (34 votes) respectively. The rest is comprised of consuming at office with 16 responses accounting to 56.7%.

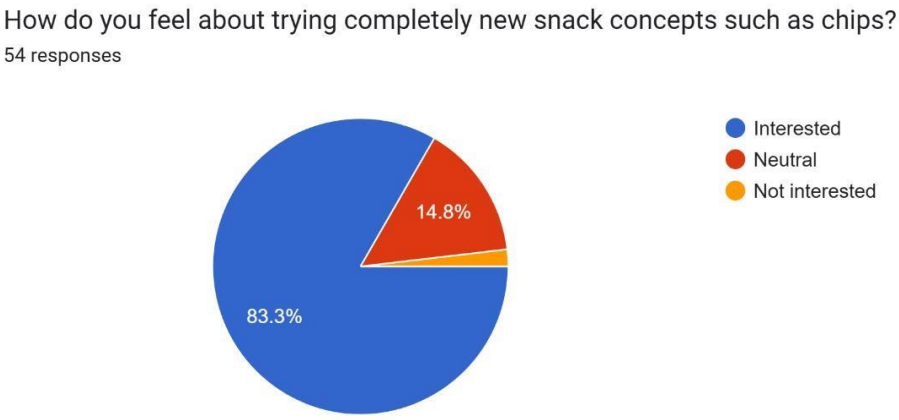

Figure 19: How do you feel about trying completely new snack concepts such as chips?

83.3% comprised of 45 people voted to try chips as a new snack concept **showing clear preference for variation** in products. The rest is comprised of 14.8% (8 people) on neutral and 1 person not interested in trying.

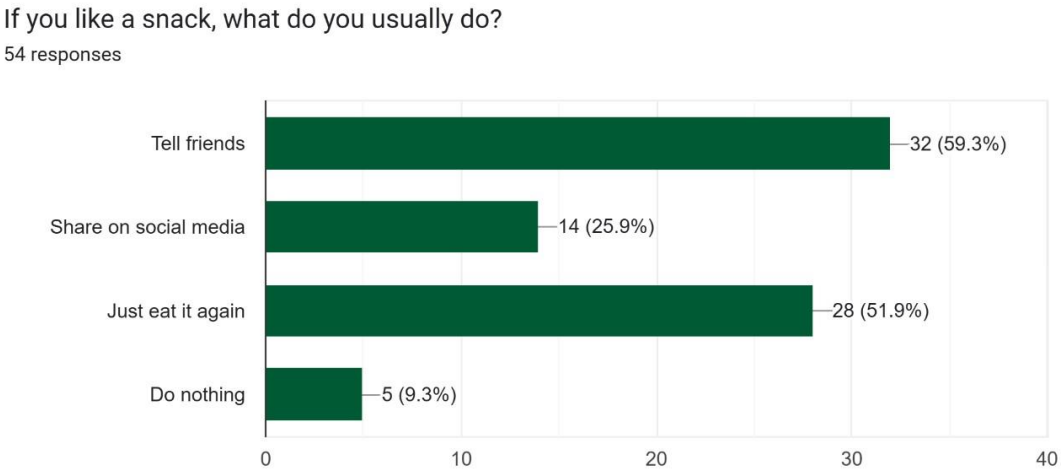

Figure 20: If you like a snack, what do you usually do?

The psychological question aimed to find out what a consumer does after they have favored a snack. **"Tell friends" & "Just eat it again" consists of 59.3% with 32 responses & 51.9% with 28 responses** while only 25.9% (14 people) like to "Share on social media". Only 5 people (9.3%) responded to prefer to "Do nothing".

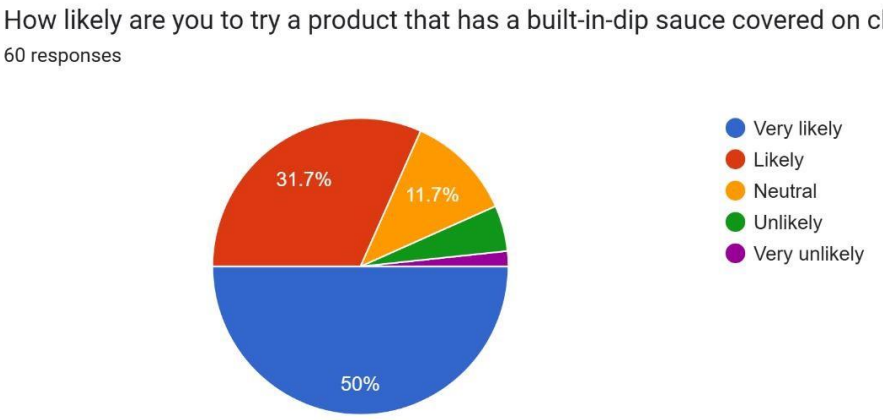

Figure 21: How likely are you to try a product that has a built-in-dip sauce covered on chips?

Lastly, when asked about if the respondents would like to try a product that has a built-in-dip sauce covered on chips, **half with 50% (30 responses) voted to "Very likely" consume the product**. 31.7% (19 people) voted "Likely", 11.7% (7 people) were "Neutral to the statement" and 1-3 people were "Unlikely" to try the product.

Segmentation

This part talks about the segmentation plan for the "Crack N Dip" chips, which aims at certain groups in the Bangladesh market. The factors that make up the segments are as follows:

Geographics:

- **Primary Focus:** The main focus is on cities like Dhaka and Chattogram, especially areas near schools, universities, and business centers.
- **Targeted Areas:** Dhanmondi, Banani, and Gulshan are popular student neighborhoods and coaching hubs where the target group lives and hangs out a lot.

Demographics:

- **Age:** The main audience is students between the ages of 16 and 25, as well as young professionals between the ages of 25 and 40.
- **Socioeconomic Status:** We're looking at people in the middle to upper-middle class who have extra money to spend on snacks and quick meals.
- **Occupation:** Students (from school to university) and young professionals working in business.

Psychographics:

- **Lifestyle**: People who love snacks, are socially active, follow trends, and value convenience. They like products that fit their busy lives.
- **Traits:** Students and young adults who like to snack during social events, study breaks, and breaks at work.

Behavioral:

- **Frequency:** Daily snacking habits, especially because of hanging out with friends and studying late at night or working long hours at the office.
- **Usage:** Mostly used as a quick snack for study breaks, social events, and times when you just want to relax.

Targeting

Target Group 01: Snack Enthusiasts (School to University Students)

- **Age Group**: 16-25 years
- **Needs**: Quick, trendy, and convenient snacks for social gatherings, study breaks, and peer hangouts.
- **Behavior**: Consumes snacks daily, seeking mess-free, on-the-go options to pair with socializing or late-night study sessions.

Target Group 02: Busy Professionals (Young Corporate Employees)

- **Age Group**: 25-35 years
- **Health-conscious**: Values efficient, quick snacks that fit into a busy workday.
- **Behavior**: Prefers mess-free, easy-to-eat snacks at the office desk or during commutes.

Positioning

We will position our product by the benefit of making our target customer think of us. People who want both excitement and ease in their snacking routine will know "Crack N Dip" as a trendy and easy snack that tastes great and is different from other snacks.

Our Unique Selling Proposition (USP) will guide our positioning strategy, which will be to offer a snack that is both fun and convenient. The main idea behind our product is to offer a delicious treat that is easy to eat, making it great for socializing and taking a break from the stress of everyday life. People will think of "Crack N Dip" as the snack to eat when they want something tasty without the mess.

Brand Elements:

We have selected “Crack N Dip” as our brand name

Brand Logo

Brand Slogan: Chips & Dips in One!

Color Palette:

#E51904
#000000
#FFECO4
#FDB881

Brand Identity

“Crack N Dip” offers a convenient, fun, and bold snacking experience with chips and dips in one package, designed for the trendy, on-the-go consumer.

Brand Promise

We promise a mess-free, flavorful snack that’s perfect for quick bites and social moments.

Brand Message

Enjoy bold flavors on the go with “Crack N Dip” chips and dips in one!

Unique Selling Proposition

Crack N Dip is special since it offers you a new snacking experience with chips and dips in one convenient package. It was designed to be carried by individuals who are in a hurry. It is full of flavor and can be consumed without making a mess, and thus, each bite is enjoyable and simple.

Quality ingredients are the first priority of Crack N Dip, which means that each combination of chips and dips will be tasty and smell delicious. All products are designed with regard to high standards of quality control, which creates a wonderful snacking experience. It also contains the right combination of taste and convenience. All chips are crispy, all dips are creamy and the entire portion is never disappointing.

Marketing Mix

Product (Experience-driven, semi-premium)

The snack product Crack N' Dip is designed to provide a more convenient and exciting snacking experience.

Rather than just offering chips, it provides crunchy chips and a dip in the same container. This eliminates the necessity to transport additional products and makes it a quicker and cleaner way to eat.

The concept behind the product is to enhance the experience of snacking. The product allows consumers to blend different flavours to enjoy a variety of taste combinations with each bite. Flavours like spicy, cheese and mayonnaise dip are added to appeal to local consumers.

This product primarily contains potato chips, made with fresh potatoes, edible vegetable oil and a minimal amount of salt and spices. The dip is made using mayonnaise, cheese flavour, chili/spice powder, milk solids and other food additives allowed for taste and preservation. The ingredients are chosen to ensure safety, quality, and to provide a consistent taste.

The product is packaged to be convenient. It's lightweight, leak-proof, and attractive. Whether on the go, at school or with friends, the product is easily incorporated into daily life. In conclusion, Crack N: Dip is a simple yet elevated snacking experience, adding a touch of luxury to everyday life.

Price (Value-based, mass-friendly)

Crack N' Dip costs between Tk 99, making it affordable for most young people. Although it's slightly more expensive than chips, the extra dip and convenience justifies the cost.

The goal is to make it feel like you're getting a little bit more for your money. This makes it more likely that people will give it a go, which is crucial for the launch of this new product.

Eventually, the company can roll out other variations at premium prices, like larger sizes or more flavours of dip. Then, it will be able to expand in the market without alienating its core customer base.

Place (Retail, focused on superstores & super shops)

The product will mainly be sold in **superstores and super shops** in metropolitan cities like Dhaka, Chattogram, Sylhet etc. As these are places where people usually go to buy snacks. These outlets create a sense of trust, as customers often believe products sold there are of better quality and hygiene.

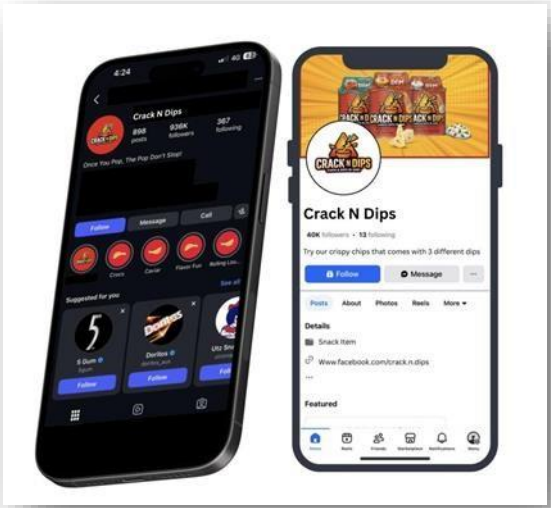

Another advantage is visibility. Products placed neatly on store shelves are easier to notice, which increases the chance of quick, unplanned purchases. Since snacks are often bought on impulse, this plays an important role.

Starting with these stores also helps build a strong and modern brand image. In the future, the product can be expanded to other locations like campus shops and small convenience stores, but the main focus will remain on organized retail at the beginning.

Promotion (Social + ground activation)

Social Media and Paid Promotion:

We will run targeted ad campaigns on Instagram and Facebook and geofence university and high school districts to ensure maximum visibility among our core demographic. Efforts will be directed towards driving traffic to our brand pages and local retail stockists.

Social Media Content

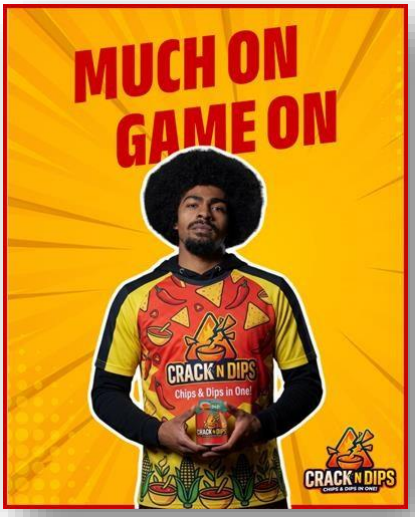

We will create a content calendar with quality visuals and short-form video content that showcases the convenience and quality of our snacks. Our content will be based around the "study-break" story, where Crack N Dip is the functional must-have of student life.

Collaborations with Influencers

We will collaborate with food influencers, such as "Hamza Choudhury", "Rafsan The Chotobhai" and "Petuk Couple", targeting students to establish social proof and reach. These collaborations will incorporate live product demos and tastings on campus to build trust and excitement among students.

Out-of-home advertisement

This focuses entirely on the product's core appeal: convenience. By highlighting the unique "chips and dips in one" packaging, it immediately shows the consumer exactly what makes the snack different.

From a consumer perspective, the bold, oversized visuals of the three flavors are designed to trigger an instant craving for people driving or walking past. It positions the product as a fun, hassle-free snack for people on the go, communicating that they get a complete snacking experience without the effort of buying chips and dip separately.

Interactive University Booths

We will place branded challenge booths in big universities with games to assess their skill levels. This is a powerful engagement opportunity and will allow for brand tests and consumer feedback in real time.

Sponsorships Science Festival

We will be a lead sponsor of regional science festivals where we will be fronting the crowds in high traffic event locations. We will be designing branded lounge areas to ensure that Crack N Dip is the first place that the first-place innovators think of to get their energy and distribute co-branded stationeries so they can be everywhere.

Sponsoring School and College Magazine

We will promote our brand through school and college magazines as a means of creating long-term exposure. Through sponsorship of critical sections, we create an association between our brand and academic performance and creativity in study periods.

Sales Promotion

This promotion will be based on classic product bundling strategy. It puts all the three flavors of Crack N Dips in one convenient tray and an instant 50 Taka off.

This gives the consumer a great feeling of value. The direct cut in price instead of making them pick up the flavor they are used to, provides them with the incentive to stock up and sample the entire line. It reduces the reluctance that they would feel towards purchasing three products simultaneously since the discount would make them feel that they are getting a smart and money-saving deal at the shelf.

Conclusion

The Crack N Dip strategy is intentionally designed to be easily integrated into students' daily lives by emphasizing ease of use, social engagement and high-impact visibility. We are working to ensure our brand remains the number one choice for young snackers through a combination of digital connectivity and targeted physical activations. "We're not just launching a product with these efforts, we are embedding Crack N Dip into the fabric of the student experience, encouraging immediate trial and long-term loyalty to the brand.

FGD Questionnaire:

I. SNACKING BACKGROUND: HABITS & PREFERENCES

1. As you were growing up, what were your early memories of snacking?

2. Where do "chips" fit in comparison to other snack items like biscuits or street food?

3. Right now, what is your favorite brand of chips in the Bangladesh market?

4. Over the years, has your favorite chip flavor changed? In what ways?

II. CONSUMPTION CIRCUMSTANCES

1. Have you ever tried to pair local chips with a sauce or dip (like ketchup or mayo) at home? If yes, what was that experience like?

2. Do you enjoy snacks that involve some activity (mixing, dipping, customizing), or do you prefer simple “open and eat”? Why?

3. Do you feel any type of frustrations when trying to eat chips or snacks with a separate sauce or dip while on the move?

III. SELECTION AND DECISION MAKING

1. In your household, how much is the popularity of chips?

2. Is there a single snack brand that your entire friend group or family agrees on?

3. Are you a "habitual purchaser" of one brand, or an "experimenter" looking for new things?

4. When it comes to store-bought dips or sauces, which is your favorite? Why?

5. In your mind, what is a "perfect" chip-and-dip combination?

IV. PRODUCT CONCEPT & TASTING EXERCISE

Introducing Crack N' Dip: a flavored chip with a matching dipping sauce inside the pack

1. How would you describe the idea of a Crack N' Dip experience to someone?

2. If this product was available in a retail store or university canteen today, would you buy it? Why or why not?

3. Which of the flavor/dip combinations do you think would be the best? Which did you like the least?

4. How much are you willing to pay for one packet?

5. Are there any specific local Bangladeshi flavors (like Achari or Kasundi) that need to be featured to make the selection better?

V. FINAL FEELINGS/THOUGHTS

1. Any final ideals or thoughts about the Crack N' Dip product line?

2. What would make it a better "value for money" product for you?

3. Where would you expect to purchase this: at a local "tong," a superstore like Shwapno, or via a delivery app?

Survey Questionnaire:
